Shri Ramdeobaba College of Engineering and Management, Nagpur Department of Computer Science and Engineering
Session: 2026-27

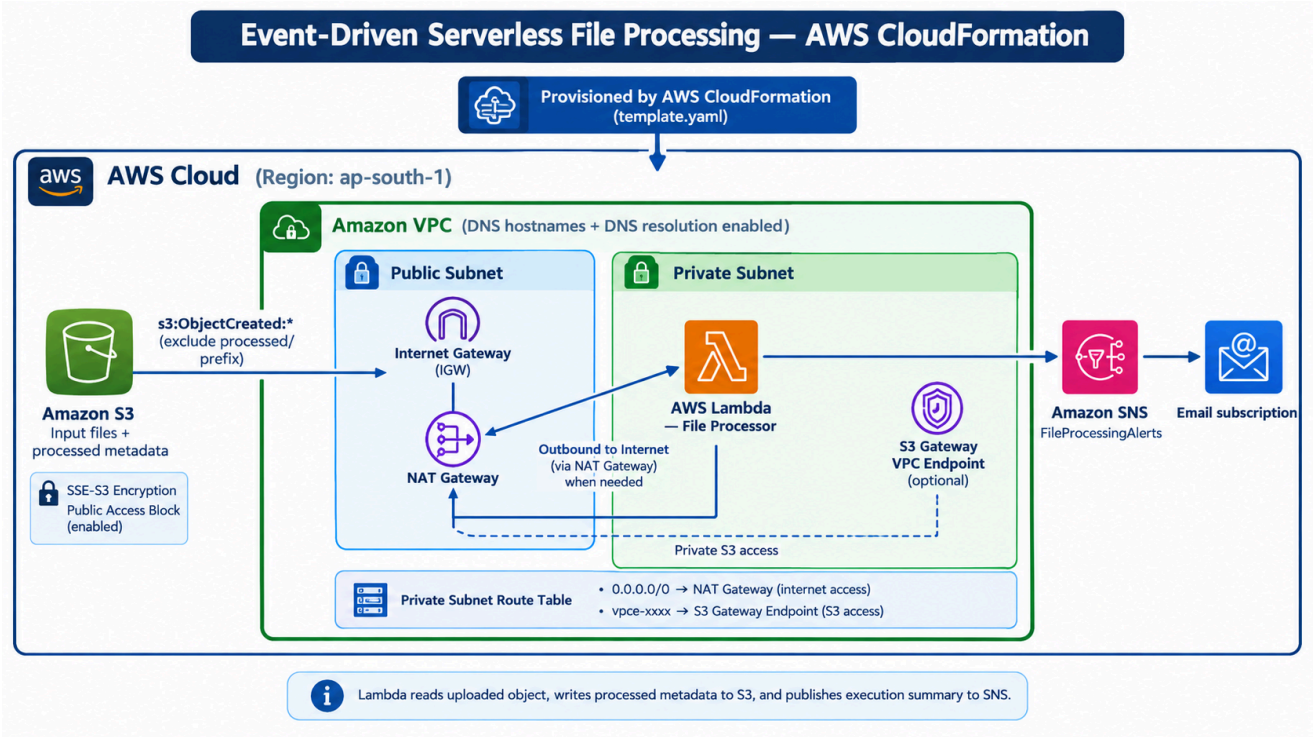

Name: Rutuja Nimje **Roll No.:C2-23**
Course : Cloud Computing **VII Semester**

CC Teachers Assessment 2

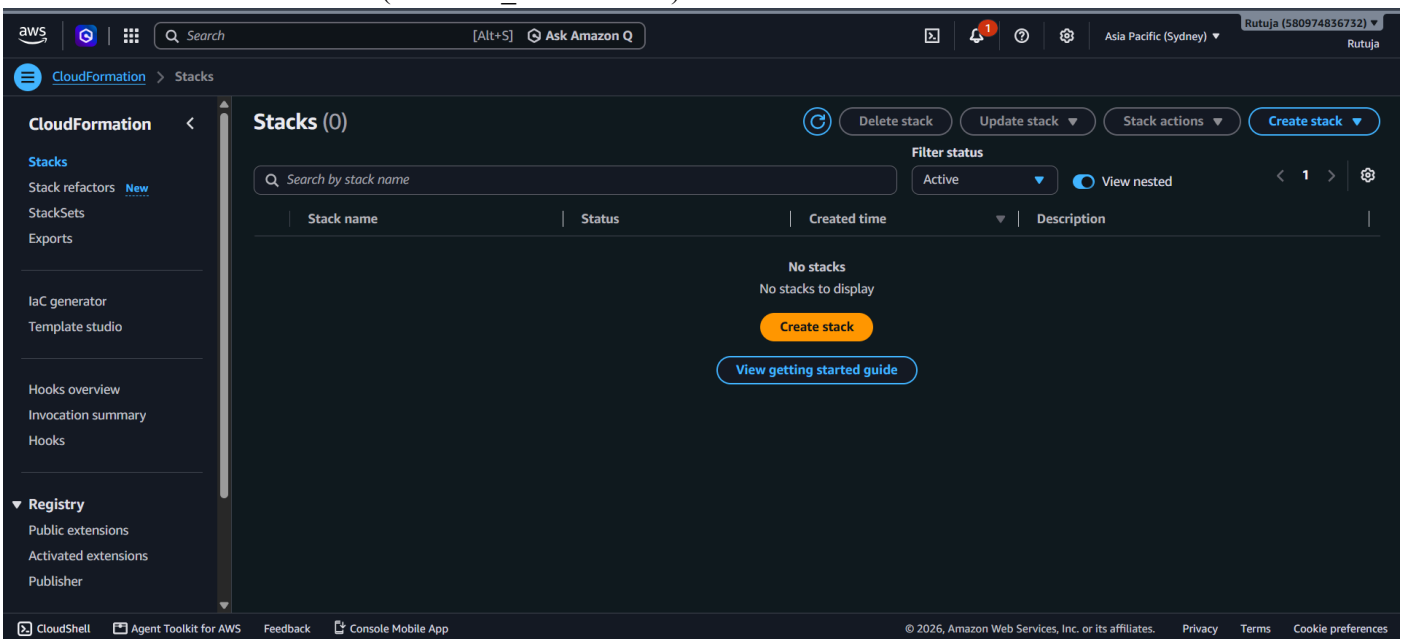

Objective: Design and deploy an event-driven serverless file processing architecture using AWS CloudFormation.
When a user or system uploads a file to an Amazon S3 Bucket, an S3 Event Notification triggers an AWS Lambda function running in a private subnet. The function processes the S3 object and sends an alert via Amazon SNS.

Stacks
Create stack
Rollback configuration - optional
Specify alarms for CloudFormation to monitor when creating and updating the stack. If the operation breaches an alarm threshold, CloudFormation rolls it back.
Notification options - optional
Specify a new or existing Amazon Simple Notification Service topic where notifications about stack events are sent.
Stack creation options - optional
Specify the timeout and termination protection options for stack creation.
Capabilities
The following resource(s) require capabilities: [AWS::IAM::Role]
This template contains Identity and Access Management (IAM) resources that might provide entities access to make changes to your AWS account. Check that you want to create each of these resources and that they have the minimum required permissions. Learn more
I acknowledge that AWS CloudFormation might create IAM resources.
